1. Sag Harbor Site and Adjacent Offsite Areas

Third Quarter (Q3) 2012 Groundwater Monitoring Event Summary

Event Date: September 18, 19 and 20, 2012

Site Phase: Quarterly groundwater monitoring

Location: The location of the Sag Harbor Former MGP site is depicted on **Figure 1**.

Monitoring Well Network

A total of 25 monitoring wells are currently located at or in the vicinity of the site (**Figure 2**). MW-05 was destroyed sometime between March and June 2007. Monitoring wells MW-01, MW-02, MW-03, MW-04, MW-06, SHMW-01S, SHMW-01I, SHMW-02I, SHMW-02D, SHMW-04S, SHMW-04I, SHMW-05S, SHMW-05I, SHMW-06S, and SHMW-06I were abandoned prior to the Q4 2008 sampling event due to the remediation activities being conducted at the site. Seven of the monitoring wells, including SHMW-01SR, SHMW-01IR, SHMW-02IR, SHMW-02DR, SHMW-04SR, SHMW-05SR and SHMW-05IR, were replaced as part of the post-remediation monitoring well replacement/installation program in Q4 2010.

Monitoring wells SHMW-02IR and SHMW-04SR were installed as larger diameter, potential dense non-aqueous phase liquid (DNAPL) recovery wells. In addition to the installation of the replacement monitoring wells listed above, new monitoring wells SHMW-01D and SHMW-02S were also installed as part of this program. Monitoring wells SHMW-07S and SHMW-07I, which were damaged presumably during the remedial activities, were abandoned during the replacement well installation program and reinstalled.

Hydrological Data

Groundwater levels were measured on September 20, 2012 at 22 of the 25 monitoring wells, during low and high tide. Monitoring well SHMW-02I was repaired during Q3 2011, altering the survey point. As a result, a groundwater level measurement was not taken. Access to monitoring wells SHMW-09S and SHMW-09I was not obtained during the water measurement round. Depth to groundwater and calculated groundwater elevations are provided in **Table 1**. Shallow and intermediate groundwater contours for high and low tidal conditions are depicted on **Figures 3 through 6**.

The groundwater flow direction was generally to the west towards Sag Harbor Cove. The ranges in depth to water and water table elevation data, as well as calculated hydraulic gradients for the shallow and intermediate portions of the aquifer in Q3 2012, are provided in the following table:

QUARTERLY GROUNDWATER MONITORING REPORT

Depth Zone	High Tide			Low Tide		
	Range		Gradient ³	Range		Gradient ³
	DTW ¹	WLE ²		DTW ¹	WLE ²	
Shallow	0.81 – 4.18	0.37 – 2.04	0.0005	0.78 – 5.58	-0.26 – 2.01	0.0021
Intermediate	0.05 – 3.98	1.47 – 2.19	0.0001	0.72 – 5.81	-0.23 – 1.48	0.0024

¹: Depth to water - Measured as feet below top of casing

²: Water level elevation - Calculated as feet above mean sea level

³: feet/foot

NAPL Thickness Data

Table 2 provides a summary of historical non-aqueous phase liquid (NAPL) data. In Q3 2012, all 23 of the accessible monitoring wells were monitored for NAPL as part of the groundwater monitoring program. There was no evidence of light non-aqueous phase liquid (LNAPL) or dense non-aqueous phase liquid (DNAPL) in any of the monitoring wells during Q3 2012.

Chemical Data

In Q3 2012, a total of 13 wells were sampled for benzene, toluene, ethylbenzene, and total xylenes (BTEX) and methyl tert-butyl ether (MTBE) by Environmental Protection Agency (EPA) Method 8260, and for polycyclic aromatic hydrocarbons (PAHs) by EPA Method 8270. Well sampling was performed on September 18, 19 and 20, 2012 and included all accessible wells on the quarterly sampling list. The remaining monitoring wells are sampled as part of the annual sampling round conducted in the fourth quarter of each year.

Chemical data for Q3 2012 (**Table 3**) indicate:

- BTEX concentrations ranged from below method detection limits (ND) in 6 of the 13 wells sampled to 2,822 micrograms per liter ($\mu\text{g}/\text{L}$) in SHMW-07SR.
- Total PAH concentrations ranged from ND in 6 of the 13 wells sampled to 4,342 $\mu\text{g}/\text{L}$ in SHMW-07SR.
- MTBE concentrations were ND in each of the 13 wells sampled, excluding a detected concentration of 4 $\mu\text{g}/\text{L}$ in SHMW-08S.

Data Trend Analysis

In general, BTEX and total PAH concentrations (see historical data in **Tables 4** and **5**) are generally decreasing in shallow groundwater on and adjacent to the site as indicated in the table below. BTEX concentrations in shallow wells, which had been decreasing in recent sampling events, increased in Q3 2012. Average shallow total PAH concentrations during Q3 2012 also increased relative to recent sampling events. However, the increases in concentrations during Q3 2012 are largely due to the increase in one well, SHMW-07SR. Additionally, monitoring well SHMW-09S, which had historically elevated concentrations of BTEX and total PAHs, was sampled along with monitoring well SHMW-09I for the first time since Q4 2009. Overall, the concentrations observed during recent sampling events remain significantly below historical levels (see table below).

QUARTERLY GROUNDWATER MONITORING REPORT
 THIRD QUARTER (Q3) 2012
 SAG HARBOR FORMER MGP SITE
 NATIONAL GRID
 NOVEMBER 2012
 WWW.SAGHARBORMGPSITE.COM

Shallow Zone	Historical*		Q1 2012		Q2 2012		Q3 2012	
	Max	Average	Max	Average	Max	Average	Max	Average
BTEX	25,860	1,097	1,418	180	709	168	2,822	307
Total PAHs	7,211**	720	927	195	1,296	224	4,342	591

Concentrations in µg/L

*: Including data from existing wells only.

**: Historical maximum for all depth zones is 580,200 µg/L (total PAH) in SHMW-02I.

Concentrations of BTEX were identified in seven shallow monitoring wells in Q3 2012. The concentrations in monitoring wells SHMW-03S (1 µg/L), SHMW-05SR (28 µg/L), SHMW-08S (2 µg/L) and SHMW-12S (41 µg/L) were relatively low (below 50 µg/L). The detected concentration in SHMW-12S decreased significantly from recent sampling events. The Q3 2012 detections in these wells remained below their respective historical mean concentrations.

Elevated BTEX concentrations in the remaining shallow wells in Q3 2012 were limited to SHMW-04SR, SHMW-07SR and SHMW-09S. The concentration in SHMW-04SR (654 µg/L) decreased compared to Q2 2012, and remained significantly below the historical mean concentration. The concentration in SHMW-07SR (2,822 µg/L) increased significantly relative to Q2 2012 and was above the historical mean concentration (1,561 µg/L), but within the historical concentration range. Concentrations in this well during future sampling events will be evaluated to determine if the Q3 2012 concentration is anomalous or if it constitutes an increasing trend.

For total PAH concentrations, seven shallow wells had detections in Q3 2012, with one of the detections being relatively low (below 50 µg/L) in well SHMW-03S (22 µg/L).

The total PAH concentrations in Q3 2012 in SHMW-04SR (1,195 µg/L), and SHMW-12S (217 µg/L) decreased from Q2 2012 levels and remained below their respective historical mean concentrations. The Q3 2012 total PAH concentration in monitoring wells SHMW-05SR (420 µg/L) and SHMW-07SR (4,342 µg/L) increased relative to Q2 2012 levels, and were both above their respective historical mean concentration. Similar to BTEX, the concentration in SHMW-07SR increased significantly but remained within its historical concentration range. Future concentrations in this well will be evaluated as noted above for BTEX. The total PAH concentration in SHMW-08S (113 µg/L) remained similar to the Q2 2012 detection and was above its historical mean concentration.

As mentioned above, monitoring wells SHMW-09S and SHMW-09I were sampled for the first time since Q4 2009. The Q3 2012 BTEX concentration in SHMW-09S (130 µg/L) was the lowest concentration recorded in the historical monitoring period. The total PAH concentration in monitoring well SHMW-09S (787 µg/L) was below the historical mean concentration. Neither BTEX nor total PAHs were detected in the intermediate well in this cluster, SHMW-09I.

Variable dissolved constituent concentrations detected in shallow groundwater over the past sampling events are likely due, in part, to the rise and fall of the water table resulting in periods of both decreased and increased dissolution of adsorbed BTEX and PAHs trapped beneath the groundwater/soil vapor interface.

SAG HARBOR FORMER MGP SITE
NATIONAL GRID
NOVEMBER 2012
WWW.SAGHARBORMGPSITE.COM

The historical NAPL data (**Table 2**) indicates that measurable quantities of NAPL have primarily been found in two onsite shallow monitoring wells (MW-02 and MW-05), one onsite intermediate well (SHMW-02I), and one offsite shallow well (SHMW-04S). Non-measurable (trace) amounts of NAPL have historically been found in two onsite shallow wells, MW-03 and MW-04, as well as in offsite shallow well SHMW-06S, and was intermittently found in SHMW-07S. All of the wells identified above in which NAPL has been historically detected were either destroyed or abandoned prior to, or during remedial activities.

Non-measurable (trace) amounts of LNAPL and DNAPL were found in replacement monitoring wells SHMW-04SR and SHMW-07SR during the first three monitoring events following the installation of these wells. However, no evidence of NAPL has been found in these monitoring wells or any of the remaining monitoring wells since Q2 2011.

Future Plans

Continue quarterly groundwater and NAPL monitoring at onsite and offsite monitoring wells.

Table 3
Notes
Sag Harbor Former MGP Site
Groundwater Monitoring Program - Q3 2012

Notes:

Analytes in blue are not detected in any sample

ug/L - micrograms per liter or parts per billion (ppb)

BTEX - benzene, toluene, ethylbenzene, and xylenes

VOCs - volatile organic compounds

PAHs - polycyclic aromatic hydrocarbons

Total BTEX, Total VOCs, and Total PAHs are calculated using detects only.

NYS AWQS - New York State Ambient Water Quality Standards and Guidance Values for GA groundwater

* indicates the value is a guidance value and not a standard

NE - not established

ND - not detected; total concentration is listed as ND because no compounds were detected in the group

Bolding indicates a detected concentration

Gray shading indicates that the detected result value exceeds NYS AWQS

Data Qualifiers:

D - Results for dilution

J - estimated value

U - indicates not detected to the reporting limit

UJ - not detected at or above the reporting limit shown and the reporting limit is estimated

NOTES:

-- not analyzed or not applicable

$\mu\text{g/L}$ - micrograms per liter

PAH - polycyclic aromatic hydrocarbons
